

Virtual Plant

Objective

The objective is to create a virtual Plant where the user must regularly check in for watering and pruning. The plant evolves its stage at every 12 hours. The watering frequency will be saved on the MySQL database.

Site structure:

Database structure:

user
id (INT 11) name varchar 200 email varchar 200 passcode(VARCHAR 20)

plant
id int (11) name varchar (200) created timestamp CURRENT_TIMESTAMP lastfed timestamp CURRENT_TIMESTAMP stage int(1) status varchar(5) Uid int(11)

virtualplant user
id : int(11)
name : varchar(150)
email : varchar(150)
passcode : varchar(25)

virtualplant plants
id : int(11)
name : varchar(150)
created : timestamp
lastfed : timestamp
stage : int(1)
status : varchar(5)
uid : int(11)
